Code-based Signatures: New Approaches and Research Directions

Abstract: Code-based cryptography is one of the main areas of research within the context of quantum-secure communication. Yet, designing an efficient and secure code-based signature scheme has been a challenging problem for the last few decades. In this talk, I will summarize some of the long history of code-based signatures, and then illustrate current work and future research directions for this important topic.

Registration for the online event to be made by 31st January via the following link:
